

**DS Bootcamp**

Hyperiondev

# Exploring Neural Networks

**Welcome**

**Your Lecturer for this session**

**Sanana Mwanawina**

# Lecture – Housekeeping

- ❑ The use of disrespectful language is prohibited in the questions, this is a supportive, learning environment for all - please engage accordingly.
- ❑ No question is daft or silly - **ask them!**
- ❑ There are Q/A sessions midway and at the end of the session, should you wish to ask any follow-up questions.
- ❑ You can also submit questions here:  
[hyperiondev.com/sbc4-ds-questions](https://hyperiondev.com/sbc4-ds-questions)
- ❑ For all non-academic questions, please submit a query:  
[hyperiondev.com/support](https://hyperiondev.com/support)
- ❑ Report a safeguarding incident:  
[hyperiondev.com/safeguardreporting](https://hyperiondev.com/safeguardreporting)
- ❑ We would love your feedback on lectures:  
<https://hyperiondev.wufoo.com/forms/zsgv4m40ui4i0g/>

# Lecture – Code Repo

Go to: [github.com/HyperionDevBootcamps](https://github.com/HyperionDevBootcamps)

Then click on the “**C4\_DS\_lecture\_examples**” repository, do view or download the code.

# Objectives

1. Understand what Neural Networks are
2. Get a good sense of how Neural Networks work

# What is a Neural Network?

- We want to build a program that can identify hand-drawn digits
- A 28x28 grid of pixels showing the number 9:

# What is a Neural Network?

- This is not difficult for you to do. For example, you can easily identify that all three of these images show the number 3:

# What is a Neural Network?

- If we were to program this the traditional way, we would need to create a program that takes in a grid of 28x28 pixels, incorporate if statements, for loops, objects, functions etc.
- What started as a “simple” task (digit recognition) becomes much more complex. It seems like the way our brains go about processing this is easier.
- That is the basis of Neural Networking

# What is a Neural Network?

- Neural Networks are a subset of machine learning that mimic the way biological neurons signal one another

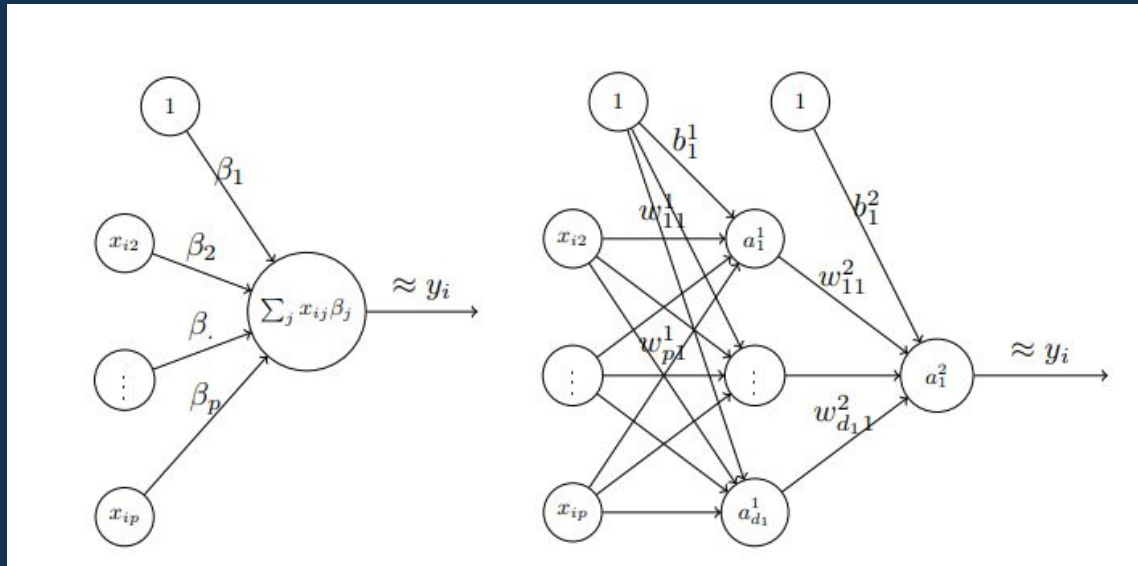

# Structure of Neural Networks

- General structure of a neural network

# Structure of Neural Networks

- On the left, we have a normal linear model and on the right we have a standard neural network

# How do they work?

# Neurons

- Neurons contain numbers inside them called activations
- When the activation number is high, the neuron “lights up”

# Neurons

0

# Neural Network step-by-step

## Step 1: Input layer

Receives input features such as pixel values in an image

## Step 2 : Hidden layers

Processes the input data from the neurons of the previous layer and produces an output based on weights and biases

# Neural Network step-by-step

## Step 3: Activation function

Applied to the output of each neuron in the hidden layers. It determines whether a neuron should be activated or not

# Neural Network step-by-step

## Step 4: Output layer

Final predictions or outputs of the neural network. In classification problems, the number of neurons in the output layer will be the number of classes

# Applications of Neural Networks

- Automatic Speech Recognition:

Parsing raw audio into distinct sounds, which combine to form syllables, which combine to form words

Raw audio

# Applications of Neural Networks

- Recommendation Systems:

Analyse user behaviour, preferences, and historical data to provide personalized recommendations. Relevant fields: e-commerce, entertainment, and content streaming platforms

- Healthcare:

Medical image classification, drug response modeling, drug discovery etc.

This is far from an exhaustive list.

Hyperiondev

# Q & A Section

**Please use this time to ask any questions relating to the topic explained, should you have any**

Hyperiondev

**Thank you  
for joining us**
